DATA SCIENCE FOR THE PUBLIC GOOD WORKSHOP

TIPS ON CONDUCTING A LITERATURE REVIEW

VICKI LANCASTER
VAL7ZV@VIRGINIA.EDU

What is a literature review?

Most projects at SDAD start with a literature review.

A literature review provides an overview of what's been written about a specific topic; it is a **focused, systematic, repeatable**, and **critical synthesis** of key research; it tests your research question against what is already known about the topic.

Literature reviews are guided by well-formulated research questions.

- The question starts your entire search process;
- provides focus for your searches; and
- guides the selection of literature sources.

What is a literature review?

In addition - we are always looking to see what other **data sources** researchers are using.

Examples of DSPG research questions

NCSES-Business Innovation

- How do you determine whether a company has launched a new product.

GATES Economic Mobility

- How do you define economic mobility?
- What are the drivers of economic mobility

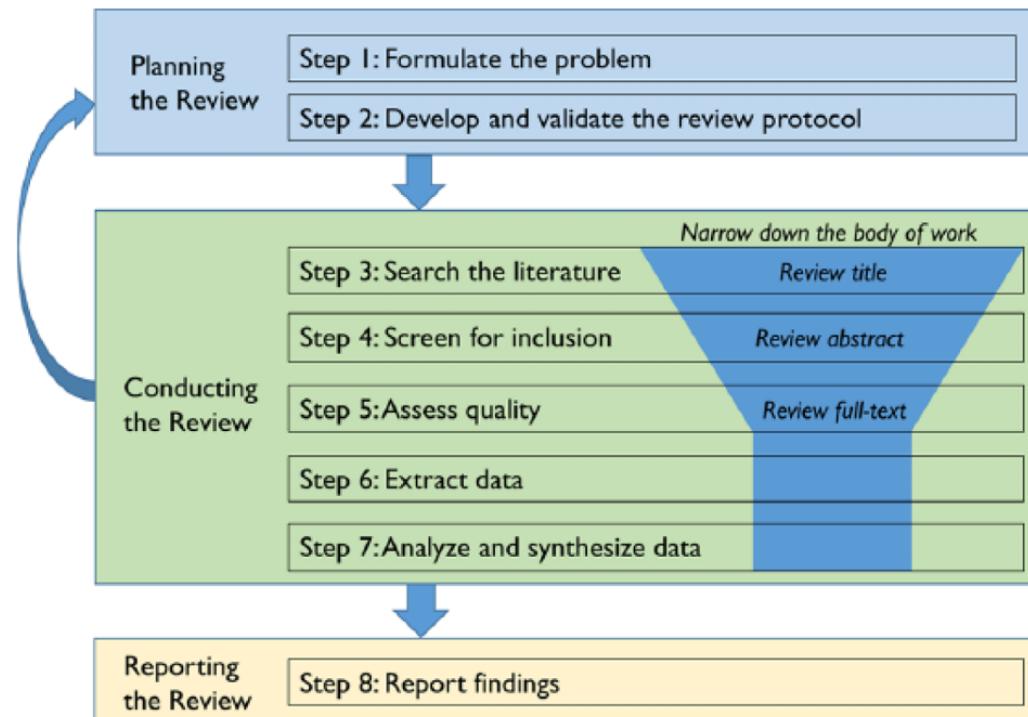

ARI Performance

- What are the survey instruments that have been used to measure performance?
- What are the cognitive and non-cognitive measures of performance?

Literature review process

Common steps of a systematic review:¹

1. formulate the research question
2. develop and validate the review protocol
3. search the literature
4. screen for inclusion
5. assess quality
6. extract data
7. analyze and synthesize data
8. report the findings.

¹ Xiao and Watson, Guidance in Conducting a Systematic Literature Review, Journal of Planning Education and Research, 2019, Vol. 39(1) 93–112 [Accessed JUNE 3 2020]

Literature review process

1. Formulate the Research Question

The research questions drive the literature review process.

This could be an iterative process: is the bulk of material such that research question needs to be narrowed down?

2. Develop and Validate the Review Protocol

After the research question is formulated, the research protocol is developed. The research protocol is a planning document that explicitly describes the methods for the review *before any literature searching takes place*. Well-described protocols minimize bias, by guarding against arbitrary decision making during the conduct of the review, and variation from the review methods. They promote research integrity, accountability, and transparency of the completed review.

Literature review process

Examples of what could go into a Review Protocol:

I. **Search Strategies**

Electronic data bases that will be searched, key search terms, any additional sources that will be searched?

II. **Selection Criteria**

Inclusion/exclusion criteria, any additional limits such as publication type, study design, date?

III. **Quality Assessment**

What criteria will be used to assess methodological quality, how will the quality assessment be performed?

IV. **Data Extraction**

What are the key data to be extracted, how will the extraction be performed and presented?

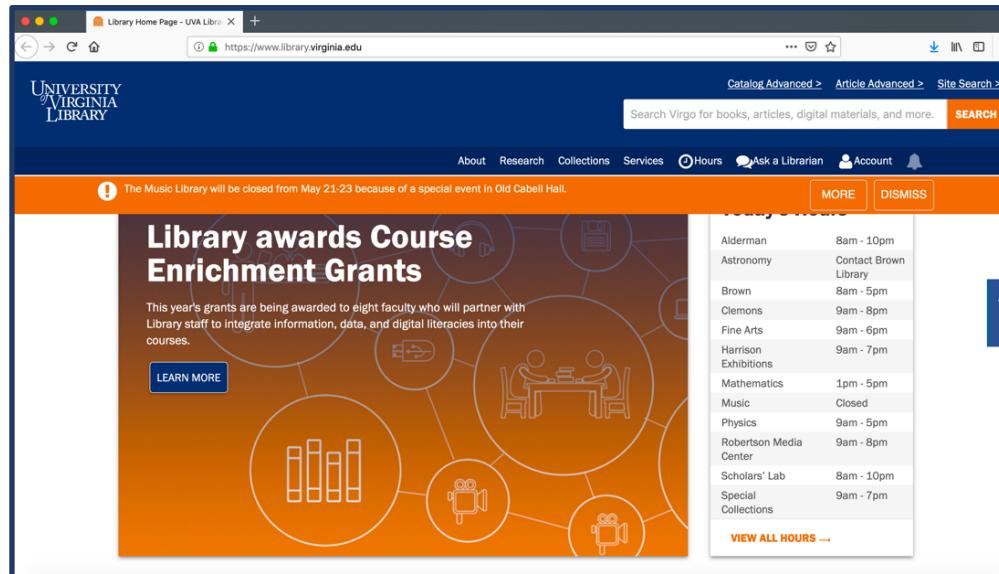

V. **Data Synthesis**

How will the data be combined, what are the potential sources of heterogeneity and how will they be assessed?

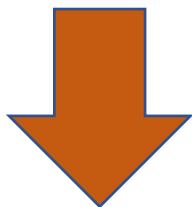

Literature review process

3. Search the Literature

There are three main sources to find literature: *electronic data bases*, *backward searching*, and *forward searching*.

UVA Library home page is <https://library.virginia.edu>. There's a search box (upper right) for the library online catalog, Virgo. Virgo searches books, ebooks, and articles, however, it does not search all the journal articles available online.

Further down on the **UVA Library home page** is the Research box.

Research

[Research software](#)

[MORE RESEARCH TOOLS](#)

A **library database** is a searchable electronic index of published, reliable resources. Databases can be interdisciplinary (spanning several disciplines) or subject-specific (focusing on a particular discipline, such as history, psychology, or literature). Databases

provide research materials from academic journals, newspapers, and magazines. Some databases also include e-books, relevant Web resources, and various multimedia.

PLEASE READ: Scanning Temporarily Suspended; Expanded Online Resources and Liaison Support Available

As of April 8, the Library has temporarily suspended scanning from physical materials in order to balance risk and benefit appropriately as our local situation evolves. This service is unlikely to resume before the end of the semester.

We believe we have met most or all instructional scanning requests for the current semester, but if you have an unfulfilled request that was identified as instructional, your subject liaison will be in touch about whether we can locate

COVID-19 Alert

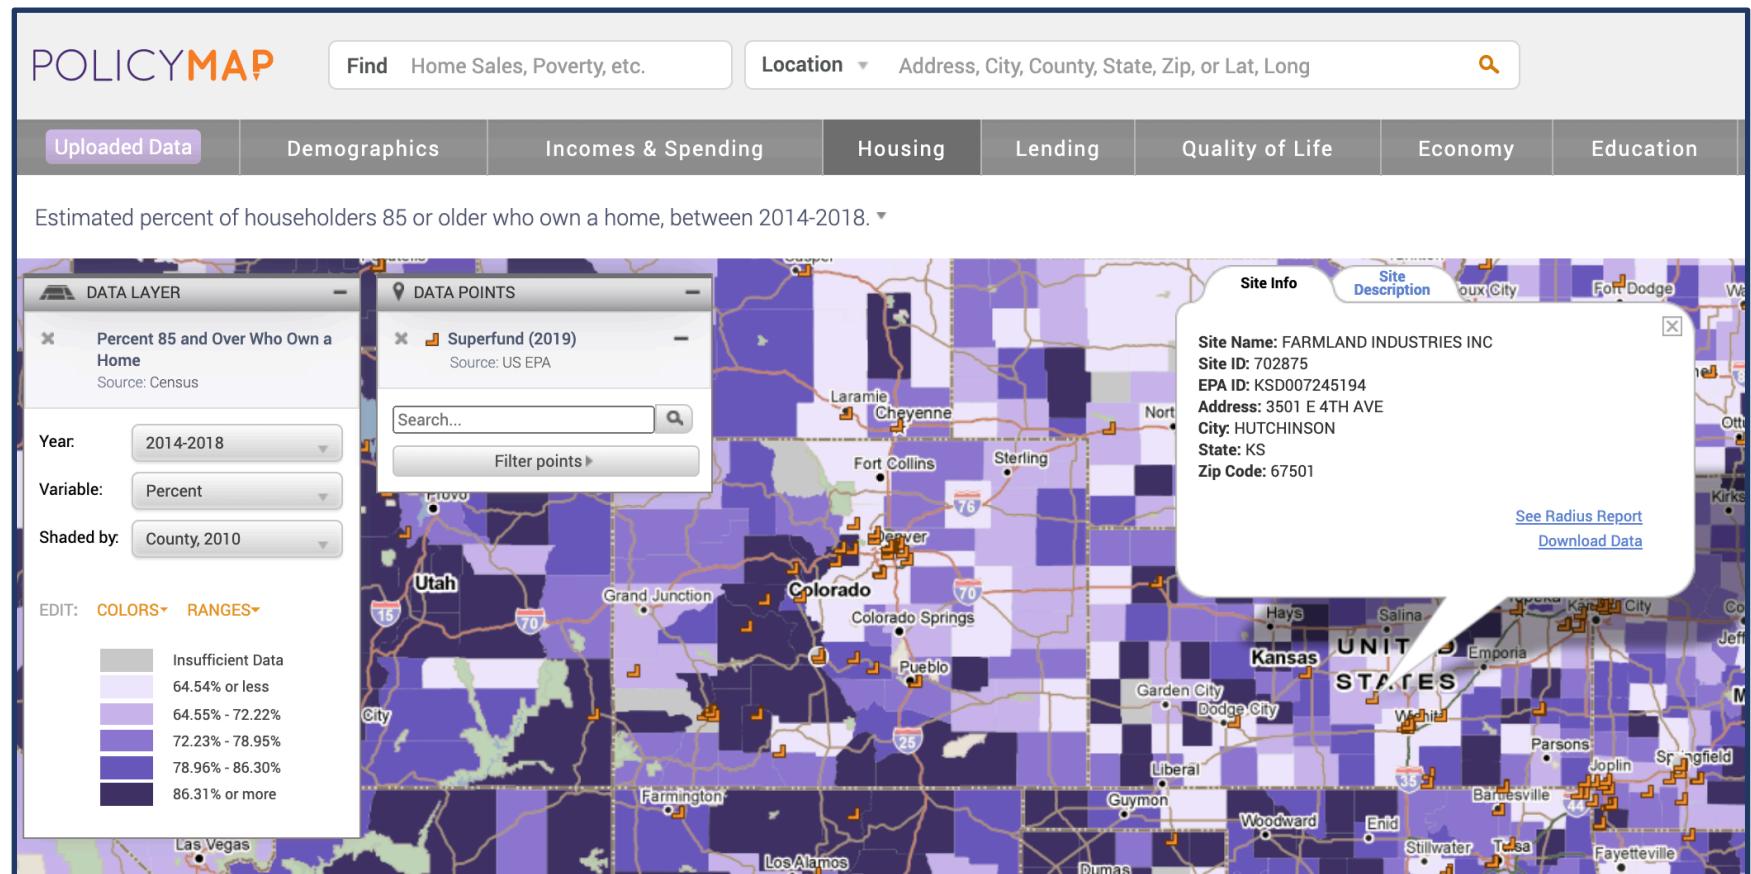

Due to the COVID-19 pandemic, any items borrowed through interlibrary loan cannot be returned to the lending libraries as most are currently closed. We ask that you hold onto your interlibrary loans until further notice.

You can request documents and books the library does not have through inter-library loan (ILLiad) from the [UVA Main Library](#):

<https://uva.hosts.atlas-sys.com/remoteauth/illiad.dll?Action=10&Form=10>

You will be prompted to login with your UVA computing ID and password before you can request submit a request.

You will also have access to UVA's Research Data Services and fee-based resources such as PolicyMap.

<http://uva.policymap.com.proxy01.its.virginia.edu/maps>

Find Data

The U.Va. Library is currently developing its collection of data sources to support quantitative research. This page provides a general overview of the resources available to faculty, staff, and students. For a complete list of all fee-based resources, please see the [Licensed Data Sources](#) page.

Literature review process

Because no database includes a complete set of published materials, a systematic search should include multiple databases.

- [Google Scholar](#) is an open access database that archives journal articles as well as “[gray literature](#)” such as conference proceedings, theses, and reports.
- With the increase in open access journal publications, one can search the [Directory of Open Access Journals](#) to find open access journals.

Literature review process

The screenshot shows a LibGuide titled "Grey Literature" from Bow Valley College. The left sidebar contains links for "What is Grey Literature?", "General & Interdisciplinary", "Government & IGOs", "Data & Statistics", "Health & Science", "Social Science & Humanities", "Business & Economics", "Library Home Page", and "Subject Guides". The main content area has tabs for "What is Grey Literature?", "Avoiding Publication Bias with Grey Literature", and "Grey Literature Search Strategies & Techniques". The "What is Grey Literature?" tab is active. It defines grey literature according to the Luxembourg Convention and lists examples such as technical reports, theses, conference papers, committee reports, government documents, institutional repositories, preprint materials, white papers, blogs, newsletters, and podcasts.

What is Grey Literature? Avoiding Publication Bias with Grey Literature

Grey Literature Search Strategies & Techniques

Grey literature has been defined by the Luxembourg Convention on Grey Literature (1997/2012) as:

Information produced on all levels of government, academics, business and industry in electronic and print formats not controlled by commercial publishing i.e. where publishing is not the primary activity of the producing body.

Examples of grey literature include:

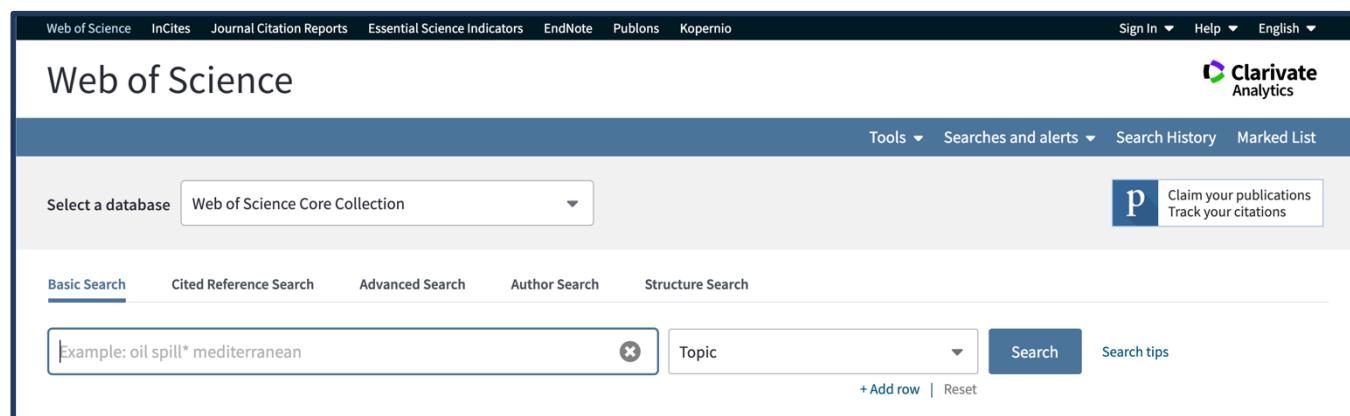

technical or research reports	institutional repositories
theses and dissertations	preprint materials
conference papers	white papers
committee reports	blogs and newsletters
government documents	podcasts

Grey Literature <https://bowvalleycollege.libguides.com/grey-literature>
(Accessed JUNE 3, 2020)

Literature review process

Backward Search: Identify relevant work cited by the articles. The reference list at the back of articles is a good way to find these articles.

Forward Search: Used to find all the articles that have since cited the articles reviewed; Google Scholar and Web of Science (access through the UVA library) allow for a forward search of articles.

Literature review process

Many search engines allow the use of Boolean operators² (and, or, not). Connecting words such as **AND**, **OR**, and **NOT** help you to **expand** or **narrow** your search by connecting your topic and each of your main points.

- “**AND**” links *different* concepts together to **narrow** your search.
- “**OR**” uses *different forms of the word* (synonyms) *or related terms* to **expand** your search.
- “**NOT**” excludes words to **narrow** your search by searching for the word before NOT and excluding the word after NOT.

²Boolean <http://rockwellschrock.com/rbs3k/boolean/index.htm> (Accessed JUNE 30, 2020)

Literature review process

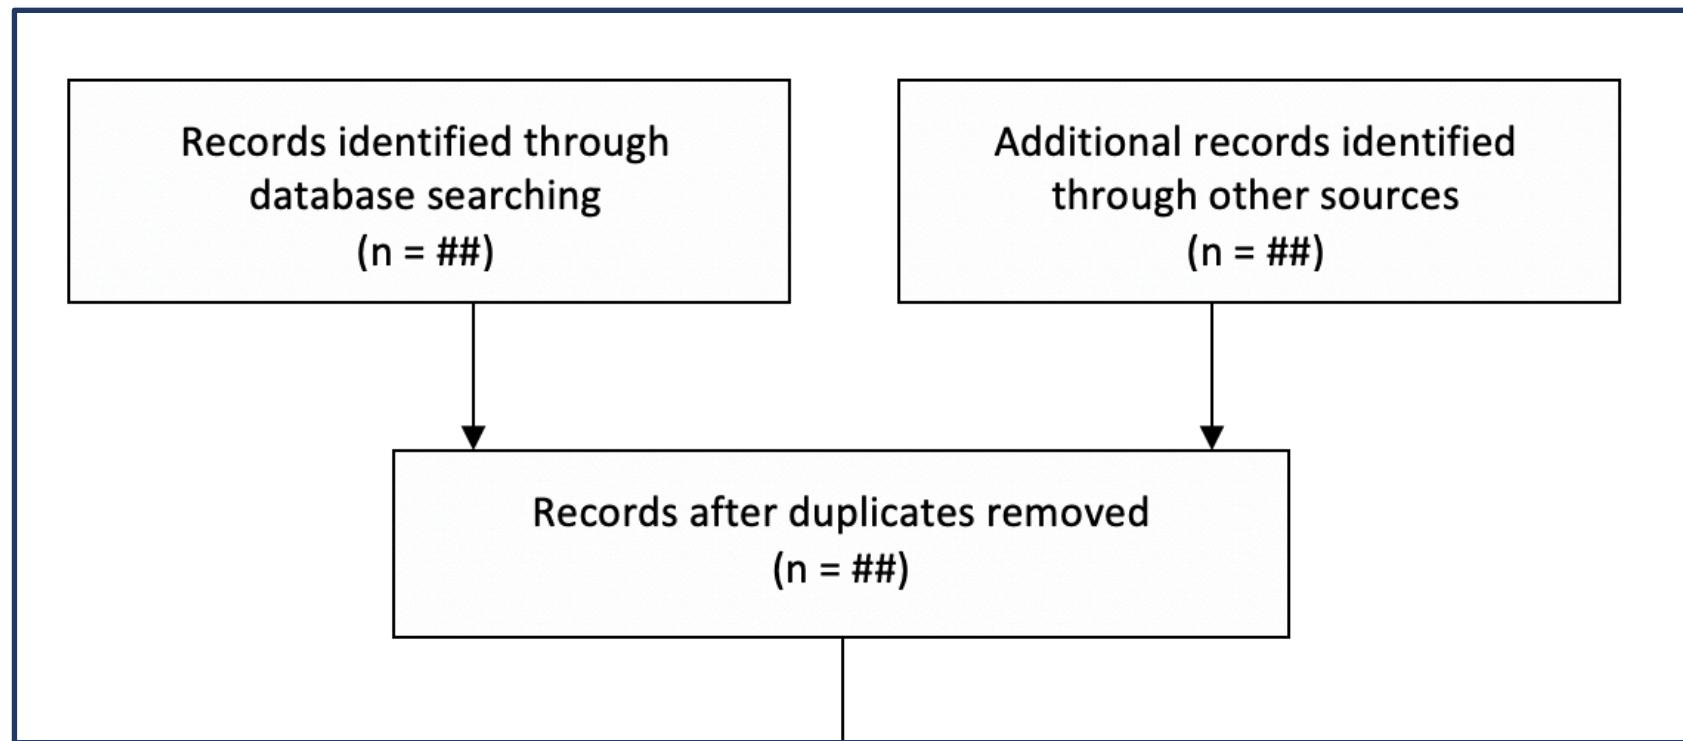

Key words used for the search should be derived from the research questions. You can dissect the research question into concept domains.

Example: What is the impact of **broadband** development on **rural** prosperity, how does it impact **property values**?

Forms	Forms	Forms
wideband	non-urban	home values
Synonyms	Synonyms	Synonyms
internet	rustic	housing prices
DSL	agrarian	farm value
cable	country	
fiber-optic		
Related Ideas	Related Ideas	Related Ideas
		property taxes

Literature review process

Keep track of the search process....

Literature review process

4. Screen for Inclusion

After the list of references is compiled, the articles are screened for inclusion/exclusion in a **two-step procedure**:

- 1st coarse screen using the abstracts - weed out articles that do not address the research question; and
- 2nd a quality assessment based on a full-text review.

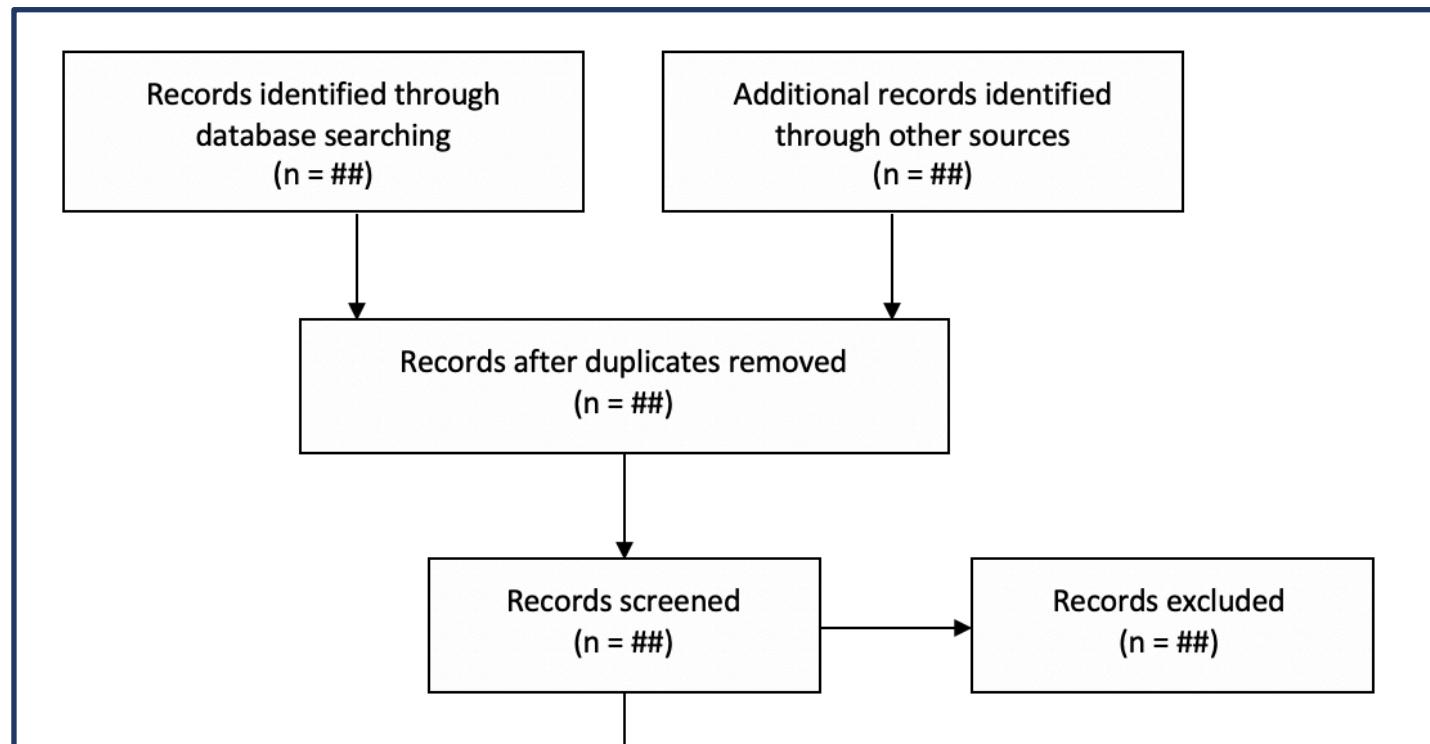

The inclusion/exclusion criteria should be function of the research question constraints. For example, maybe articles are restricted to

- a geographic area (urban versus rural);
- observation unit (household versus census block); or
- time period (pre- versus post- 2009 recession).

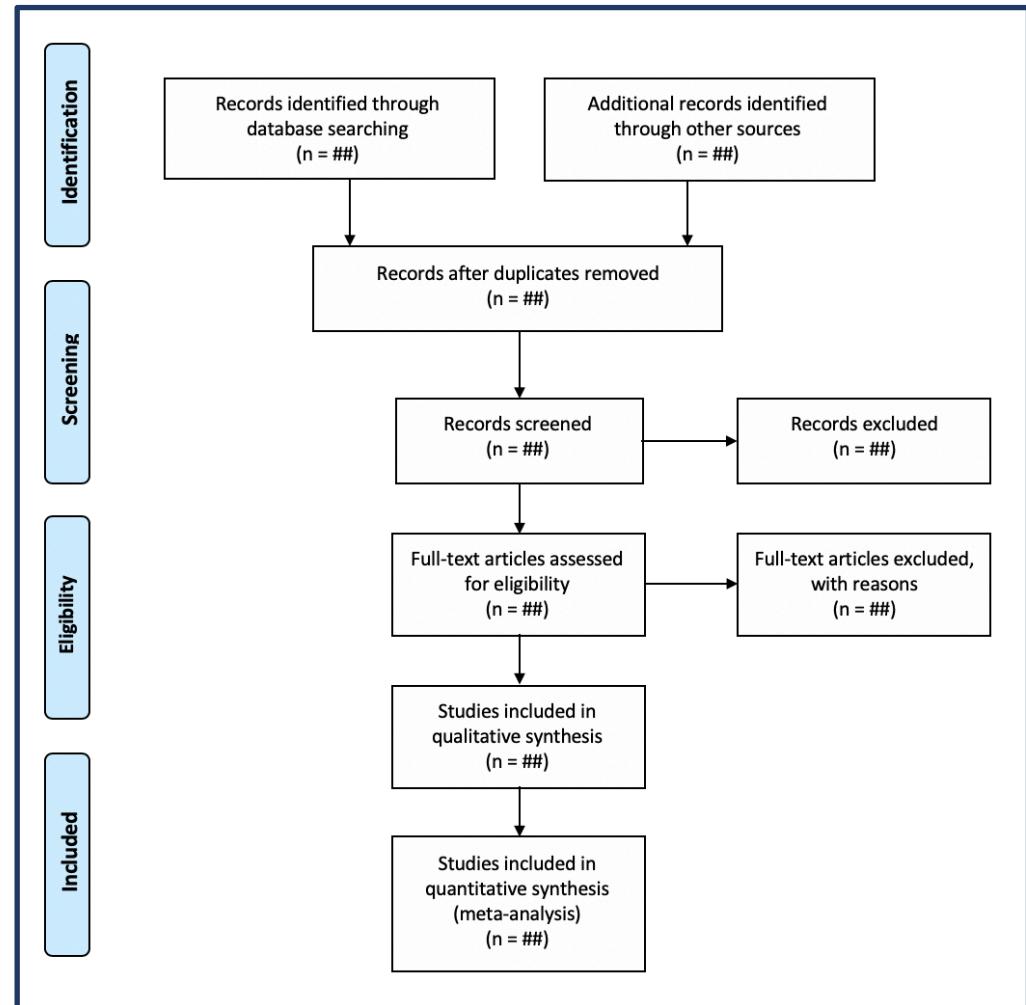

Literature review process

The inclusion/exclusion criteria should be explicitly stated in the review protocol.

Keep track of the screening process....

The findings from the first 4 steps can be displayed in a flow diagram.

Flow Diagram from: Moher D, Liberati A, Tetzlaff J, Altman DG, The PRISMA Group (2009). Preferred Reporting Items for Systematic Reviews and MetaAnalyses: The PRISMA Statement. PLoS Med 6(7): e1000097.
doi:10.1371/journal.pmed1000097 [Accessed JUNE 30, 2020]

Literature review process

Steps 5 - **Assess Quality**, 6 - **Extracting Data**, and 7 - **Analyzing and Synthesizing Data**, are a function of the purpose the literature review, the literature type (is the data qualitative, quantitative, or mixed), and review type.

See *Xiao and Watson (2017) Guidance on Conducting a Systematic Literature Review, Journal of Planning Education and Research, Vol 39(1) 93-112, Table 1* for detailed information and references.

Literature review process

8. Report Findings

How the literature review will be incorporated into your project will be a function of your research question:

- it could be a bulleted list of findings for the sponsor,
- a detailed report,
- maybe your literature review was on a single concept in your research question - for example “composite indices” for the Fairfax project and what you learned will help you develop new methodology.

Even though the literature review is not the main focus of these projects, the process should be systematic, and your findings should include sufficient detail to allow other researchers to follow your steps.

An SDAD example

Research Question: What non-cognitive attributes contribute to the performance of an enlisted Soldier? What are the validated constructs of performance that are relevant to first term enlisted soldiers?

Our **screen for inclusion** required:

- validated constructs of performance (character strengths, persistence, integrity, grit, self-regulation, creativity, etc.);
- a definition of the construct;
- access to the instrument used to define the construct; and
- the population the instrument was measured on.

We looked for literature in the Defense Technical Information Center (“gray literature”) and education, sports, management, business, and psychology literature.

Our Step 7 - Synthesizing the literature resulted in a nomological network that linked the constructs together.
